

Traction Clean

a highly effective cleaner-degreaser combined with specially formulated additives that increase the slip resistance of the floor surface.

This revolutionary new floor safety product effectively breaks down and suspends soils including food, protein based soils, light oils and dirt that contribute to slippery floor conditions leaving the surface squeaky clean and safer for pedestrians.

How does Traction Clean work?

The detergents and surfactants in Traction Clean effectively break down and suspend soils such as dirt and oils, removing the cause of many slippery floors. Then, special additives in Traction Clean increase the slip resistance beyond the level inherent in the floor surface. Field tests indicate an increase in slip resistance of .1 SCOF when applied on a regular basis.

Suitable for various types of flooring including:

- Porcelain
- Stone
- Sealed wood
- Concrete
- Rubber
- Cork
- Linoleum
- Epoxy

Traction Clean

Unlike other floor products, Traction Clean helps reduce your slip and fall liability by creating a 'vice like' grip between your feet and the floor.

"65% of all slip/fall accidents are preventable".¹

Grip Guard has a floor safety solution for every floor surface.

OH&S regulations require business owners to provide a safe working environment. In fact, **all** property owners have this responsibility.

The second largest workplace accident is slip and fall accidents. There is no escaping the issue of responsibility for employers and this onus was emphasized in a recent sentencing of a business owner who failed to comply with OH&S regulations.

"The genesis of this legislation (the OHS Act) is so that people are not in danger at work. Employers bear that responsibility and you can not diminish that responsibility".²

¹ Bowman, Richard "Where to next with Slip Resistance Standards?"

² <http://www.ohsrep.org.au>

Traction Clean is an essential floor safety product for all business owners to help meet OH&S requirements, especially in:

- Restaurants
- Food Service Areas
- Restrooms
- Nursing Homes & Hospitals (excellent for shower areas)
- Light industrial manufacturing facilities
- Commercial kitchens
- Change rooms/shower areas
